### **Sales of the “eFIRST Process” BPM Platform Tool Start**

BancTec Japan, Inc. (Head office: 8F Arco Tower, 1-8-1 Shimomeguro, Meguro-ku, Tokyo; President: Kiyohiro Miisho) has started sales of “eFIRST Process”, a next-generation BPM platform tool that provides powerful support for business reforms.

“eFIRST Process” is capable of cutting the cost of office operations while achieving business process reforms. This BPM platform tool provides integrated coverage of each step of the reform process. The software begins with the analysis of operations for improving productivity and extends to upgrading the functions of IT systems following installation and commissioning. “eFIRST Process” creates definitions for business process modeling, simulations and work flows. In addition, data and computer displays for operations can be produced automatically by simply inputting the settings. By breaking systems down into separate modules, “eFIRST Process” makes it easy to fabricate accurate prototypes. This makes it possible to provide high-quality applications within a short time.

BancTec Japan has the leading market share in Japan<sup>1</sup> in the sale of core work flow systems used for the centralized clerical operations of life insurance companies and other financial institutions. By combining BPM consulting, a core strength of the company, with “eFIRST Process”, BancTec Japan plans to reinforce its ability to meet clients’ needs involving the use of IT for internal controls and other business processes.
